

Looking to infuse a globally-significant ecological phenomenon and current real world resource management controversy into your classroom?

Interested in meeting and learning firsthand from a select and diverse group of experts and stakeholders offering a wealth of knowledge and experience with the issues?

Then a Green Eggs & Sand Workshop is what you need!

During the full and new moon events in May and June, thousands of horseshoe crabs come ashore to spawn. It is also during this time when migrating shorebirds descend upon the beaches to rest and feed on the horseshoe crab eggs before continuing onto their breeding grounds. This interaction between horseshoe crab, shorebird and humans is what lays the ground works for the Green Eggs & Sand (GE&S) workshop.

Register now to be a part of one of the intensive, full-weekend, not-to-be-missed, field-enriched workshop during the peak horseshoe crab spawning and shorebird-viewing time on the Atlantic Coast in May. Join the Green Eggs and Sand Team for a 2-day workshop at the Chincoteague Bay Field Station in Wallops Island, VA. Green Eggs & Sand is an innovative workshop experience and set of curriculum modules designed to explore the Atlantic Coast horseshoe crab and shorebird phenomenon. The workshop will be held Friday evening, May 12, 2017 through Sunday morning, May 14, 2017. You'll receive training and materials to educate middle and secondary students about the horseshoe crab/shorebird phenomena.
